

LASER

TRADITIONAL

LASER TECHNOLOGY

All Groupe Lacasse laminate products have laser FUZE edgebanding. Thanks to our new equipment, the edgeband is heated with a laser beam and fused to the laminate board for a stunning, seamless finish!

Advantages of FUZE versus traditional glue application

- Zero joint between the board and the edgeband;
- Sealed from microbial contamination;
- 25-year warranty applies to edgeband delamination;
- Surfaces are easier to clean, which is the best way to eliminate viruses;
- Greater resistance to moisture and impact versus 2.5 mm and 3 mm PVC edgebands.

Samples

Large 12 x 12-inch laminate boards with laser edgebanding are available at the Literature Center in limited quantities (1 sample per client/order). Contact your local sales representative to obtain a sample.
